Discover Wood & Stone

Real wood, pure pleasure

A floor is the foundation on which everything rests. You can take that literally, because a well-designed floor brings a sense of calm into the home. The warm simplicity of nature. No matter how hard life wobbles. And the same applies to Wood & Stone.

This floor combines an ultra-strong, water-resistant SPC core with a beautiful oak top layer. SPC stands for Stone Plastic Composit and consists of 70% limestone and 30% PVC. The board is therefore mainly made up of wood and stone, so that's why it's called Wood & Stone. Enjoy all the benefits of high-quality wood with a floor you can live life on to the full. Thanks to the pore-filling matte varnish, this floor can handle almost anything. So you don't need to worry about a thing! Cherish it. Relax on it. Live life in the purest sense of the word.

Why choose a Wood & Stone floor?

A generation-long guarantee

A Wood & Stone floor is designed to withstand a knock or two. If your floor is laid and maintained according to the rules of the trade, it will stay beautiful for years to come. **That's why we give you a 20-year guarantee on your home floor. In a commercial environment, you enjoy a 15-year guarantee.**

1 Because real wood has so much character.

Your Wood & Stone floor has **a real oak top layer**. Each plank is just that little bit different, with beautiful colour shades and **grain patterns and structures that are full of individuality**. We deliberately don't fill small cracks or knots, because it is precisely those little quirks that make your floor **100% original**.

2 Because it is water-resistant for 24 hours.

To protect your floor against moisture, we apply a layer of matte varnish over the top layer. Which is not only very easy to maintain but it also makes this floor ideal for any room, even for normal use in the bathroom or kitchen.

3 Because it is perfect for renovation projects.

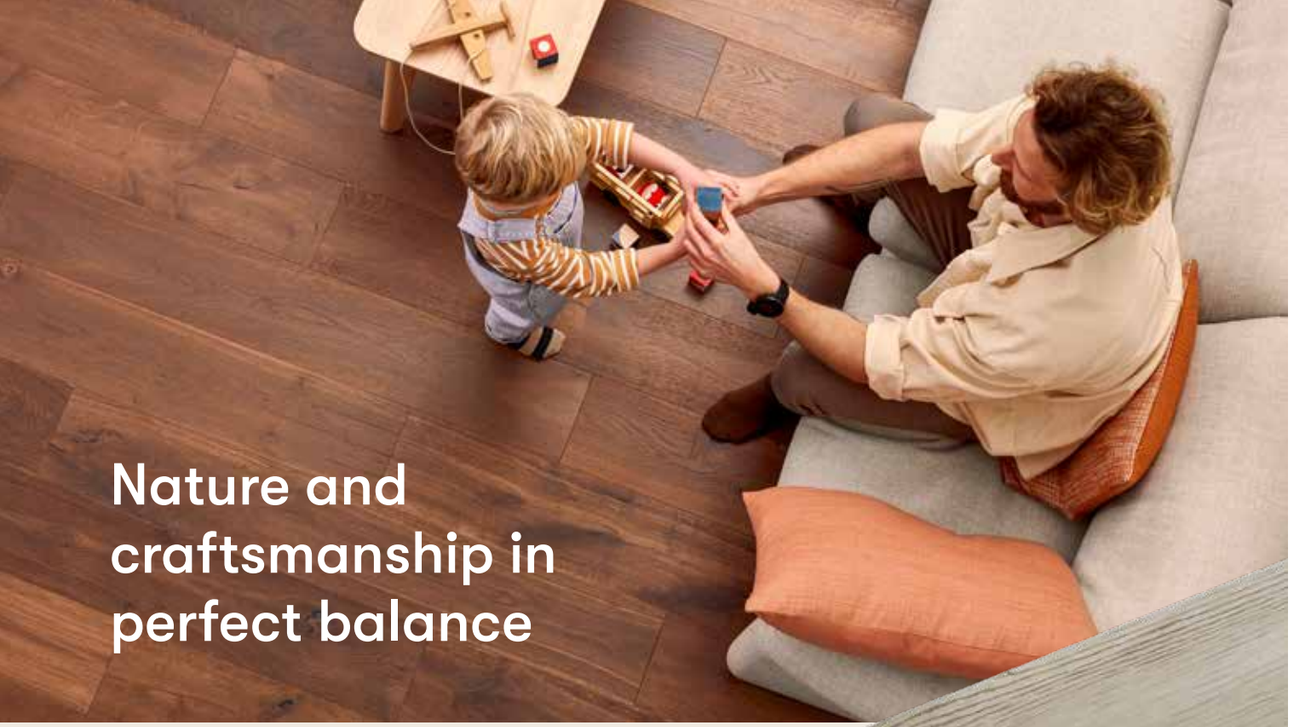

Wood & Stone planks are only **7 mm thick**, so **easy to work with**. So easy, in fact, that this floor can be laid on top of most existing floors. The strong SPC core is not only water-resistant but also stable and resistant to heat and direct sunlight.

4 Because it's almost noiseless.

Your Wood & Stone floor **mutes the transmission of sound** between different floors by an **impressive 20 dB**. So with this floor, you can live life to the full in peace and quiet.

5 Because you can easily install it yourself.

With the **Drop Lock system**, you can easily click this floor together so that it's completely watertight. You don't have to purchase a **subfloor** separately because it is **already integrated** into the floor. Of course, we also have the **matching skirting boards and profiles** to finish everything off perfectly.

Nature and craftsmanship in perfect balance

1

On top of the oak top layer, a layer of pore-filling, water-resistant matte varnish is applied to protect the wood against water.

2

The oak top layer is the highlight of your floor. To make sure that your floor can show off the most beautiful grain patterns and structures, we use only carefully selected heartwood and no sapwood.

3

SPC stands for Stone Plastic Composite. This means that the core consists of a mix of 70% limestone and 30% PVC, which makes it rock solid and water-resistant.

4

No need to lay a subfloor yourself because your Wood & Stone floor includes an integrated bottom layer. This layer makes short work of minor unevenness in your surface, and mutes noise and shocks by as much as 20 dB.

Stelvio Havanna

The sustainable option

Nature is our muse. We use nature's materials, embrace its quirks and are inspired by its talent for creating rest and relaxation. It goes without saying that we attach great importance to sustainability. The oak that we use for Wood & Stone floors comes from old trees that have done their work – converting CO_2 into oxygen. Because the veneer layer of a Wood & Stone floor is only 1 mm thick, an enormous amount of veneer can also be extracted from one tree. This way, we limit the amount of wood that we need to use, and we guarantee an end product that does full justice to old oak trees.

Stelvio Pure Oak

Wood in the bathroom? This is not usually recommended because many floors cannot withstand the dripping and splashing that comes with a bathroom. But thanks to its plastic core and its layer of pore-filling matt varnish, Stelvio is perfectly resistant to water, humidity and temperature changes.

Caring for your floor

Maintenance is gold

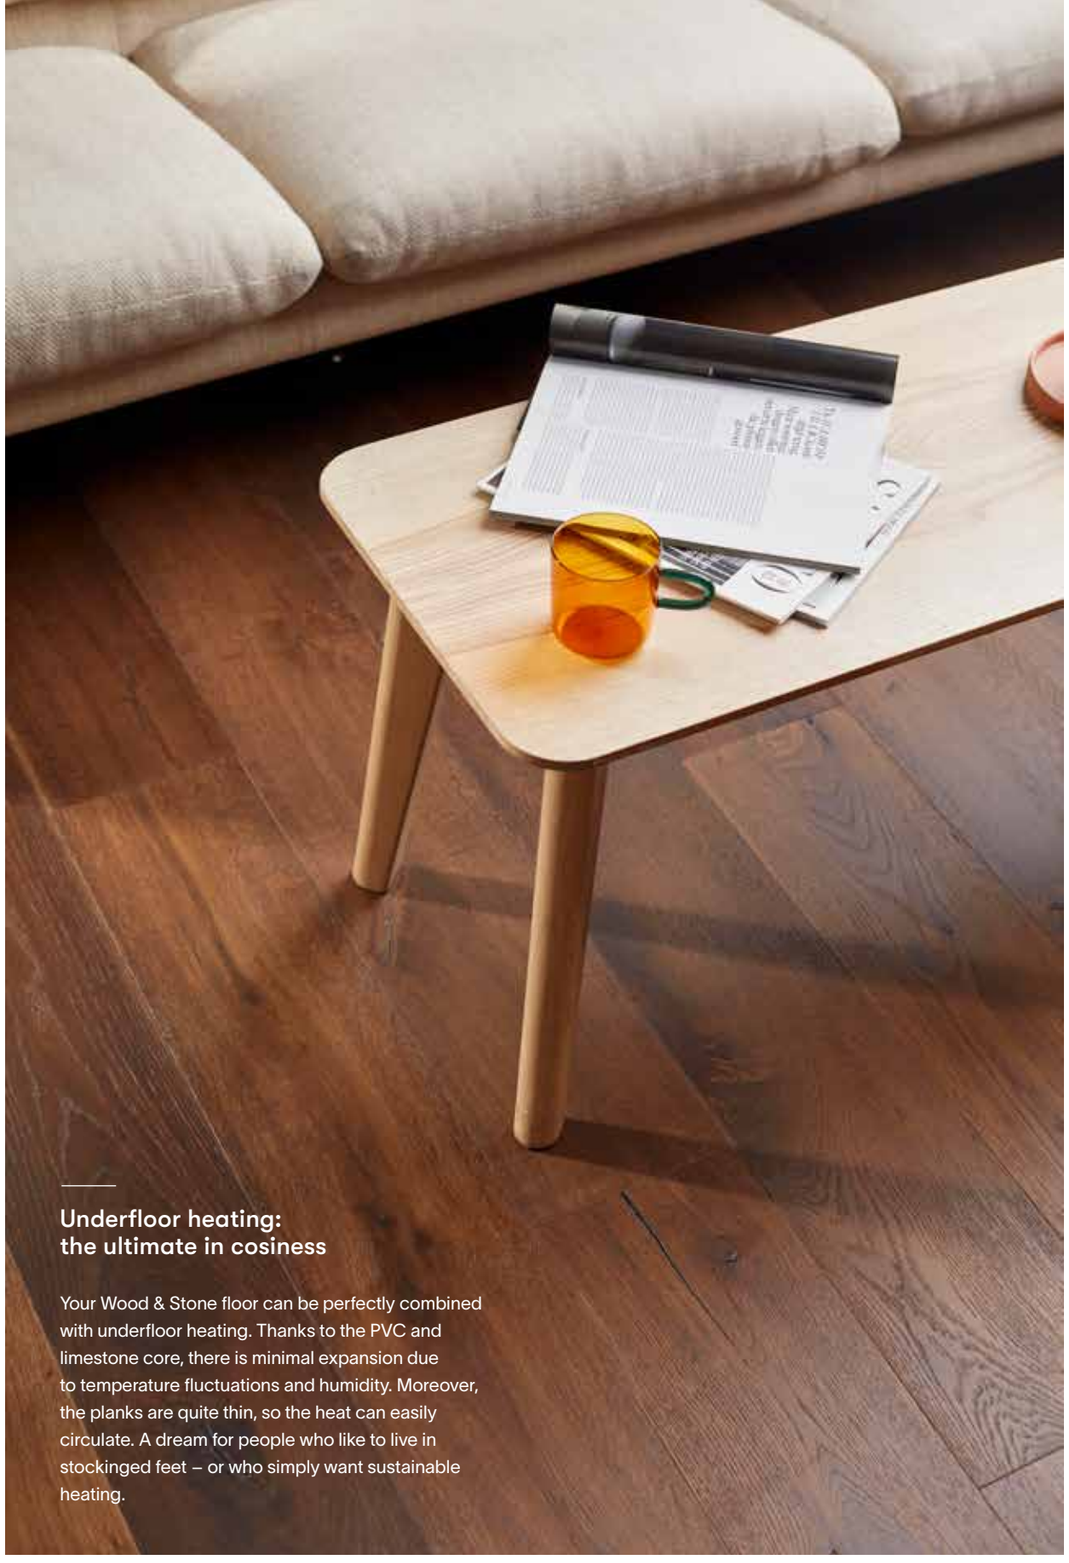

Your floor is your foundation. No matter how beautiful and high-quality your Wood & Stone floor, it always needs the right care. For daily maintenance, you can sweep your floor clean with a soft brush. If you prefer to vacuum, always retract the brush to avoid scratches. Keep the floor clean with a **special cleaning agent for varnished floors**, such as the Bona Wood Floor Cleaner.

While living life to the full on your floor, small scratches will appear in the wood over time. That doesn't matter, and you can hardly see them with the naked eye. By treating your floor annually with a **matte polish** (such as Bona Wooden Floor Polish), you seal off the micro-scratches and give your floor a beautiful, smooth look again.

3 golden rules

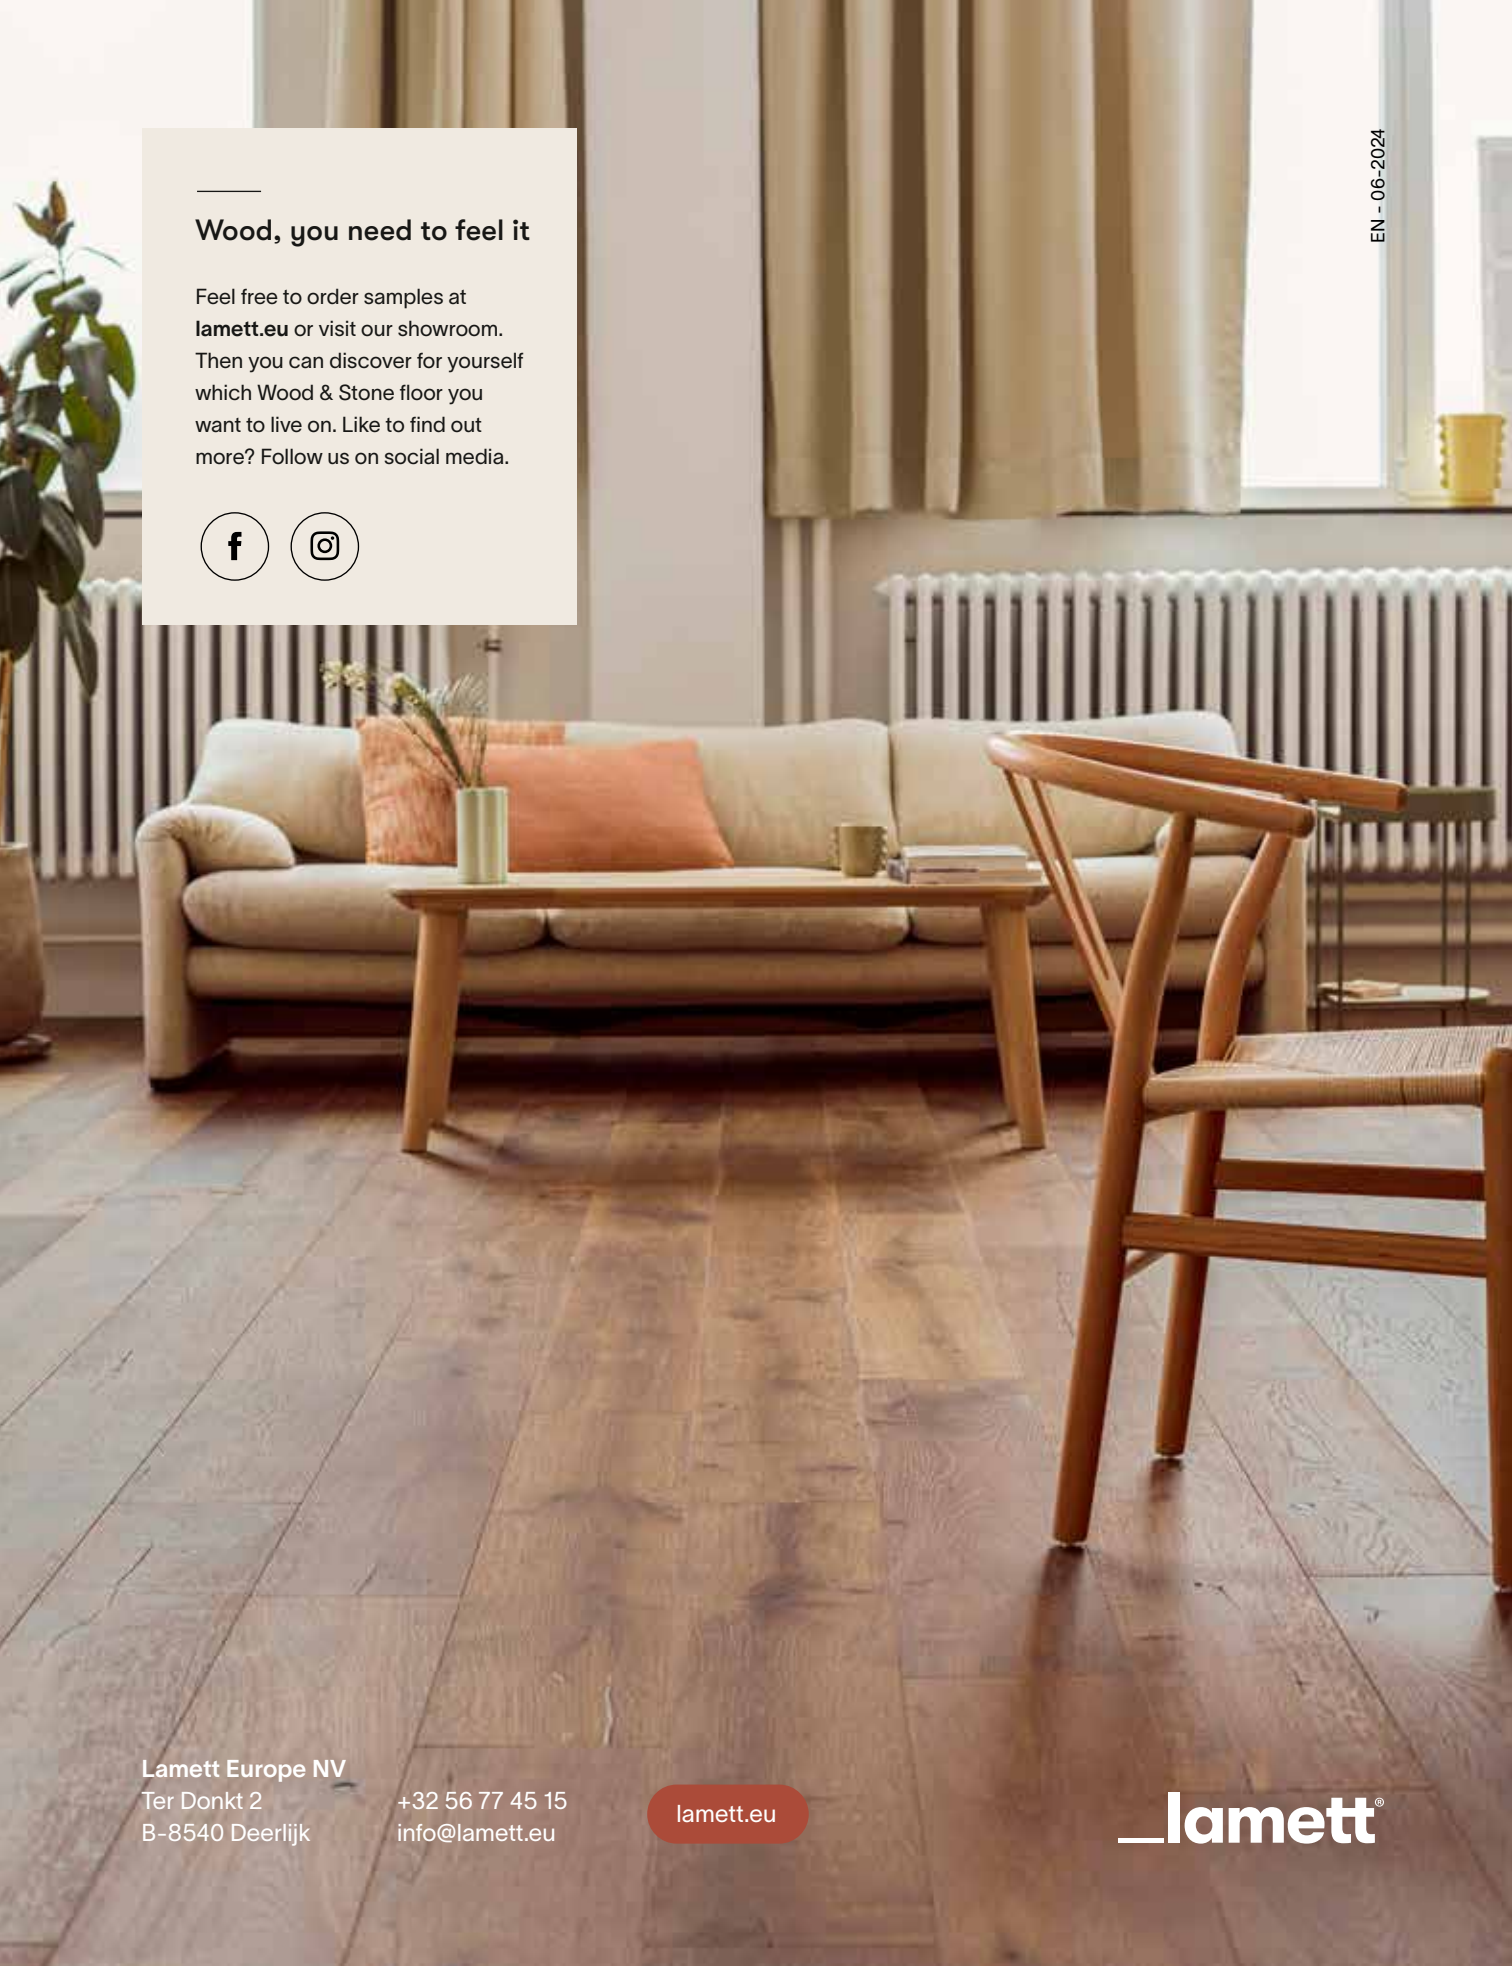

1. Clean your floor regularly. Leftover grit can damage your floor and cause scratches.
2. Do you want to move a piece of furniture? Then lift it. Dragging it can damage your furniture and your floor.
3. Avoid maintenance products with wax because they leave a layer of grease on top of the wood. One more thing: always respect the correct dosages of the products you use.

Underfloor heating: the ultimate in cosiness

Your Wood & Stone floor can be perfectly combined with underfloor heating. Thanks to the PVC and limestone core, there is minimal expansion due to temperature fluctuations and humidity. Moreover, the planks are quite thin, so the heat can easily circulate. A dream for people who like to live in stockinged feet – or who simply want sustainable heating.

Wood, you need to feel it

Feel free to order samples at **lamett.eu** or visit our showroom. Then you can discover for yourself which Wood & Stone floor you want to live on. Like to find out more? Follow us on social media.
