
Floors designed
for life.
lamett®

Floors
designed
for life.

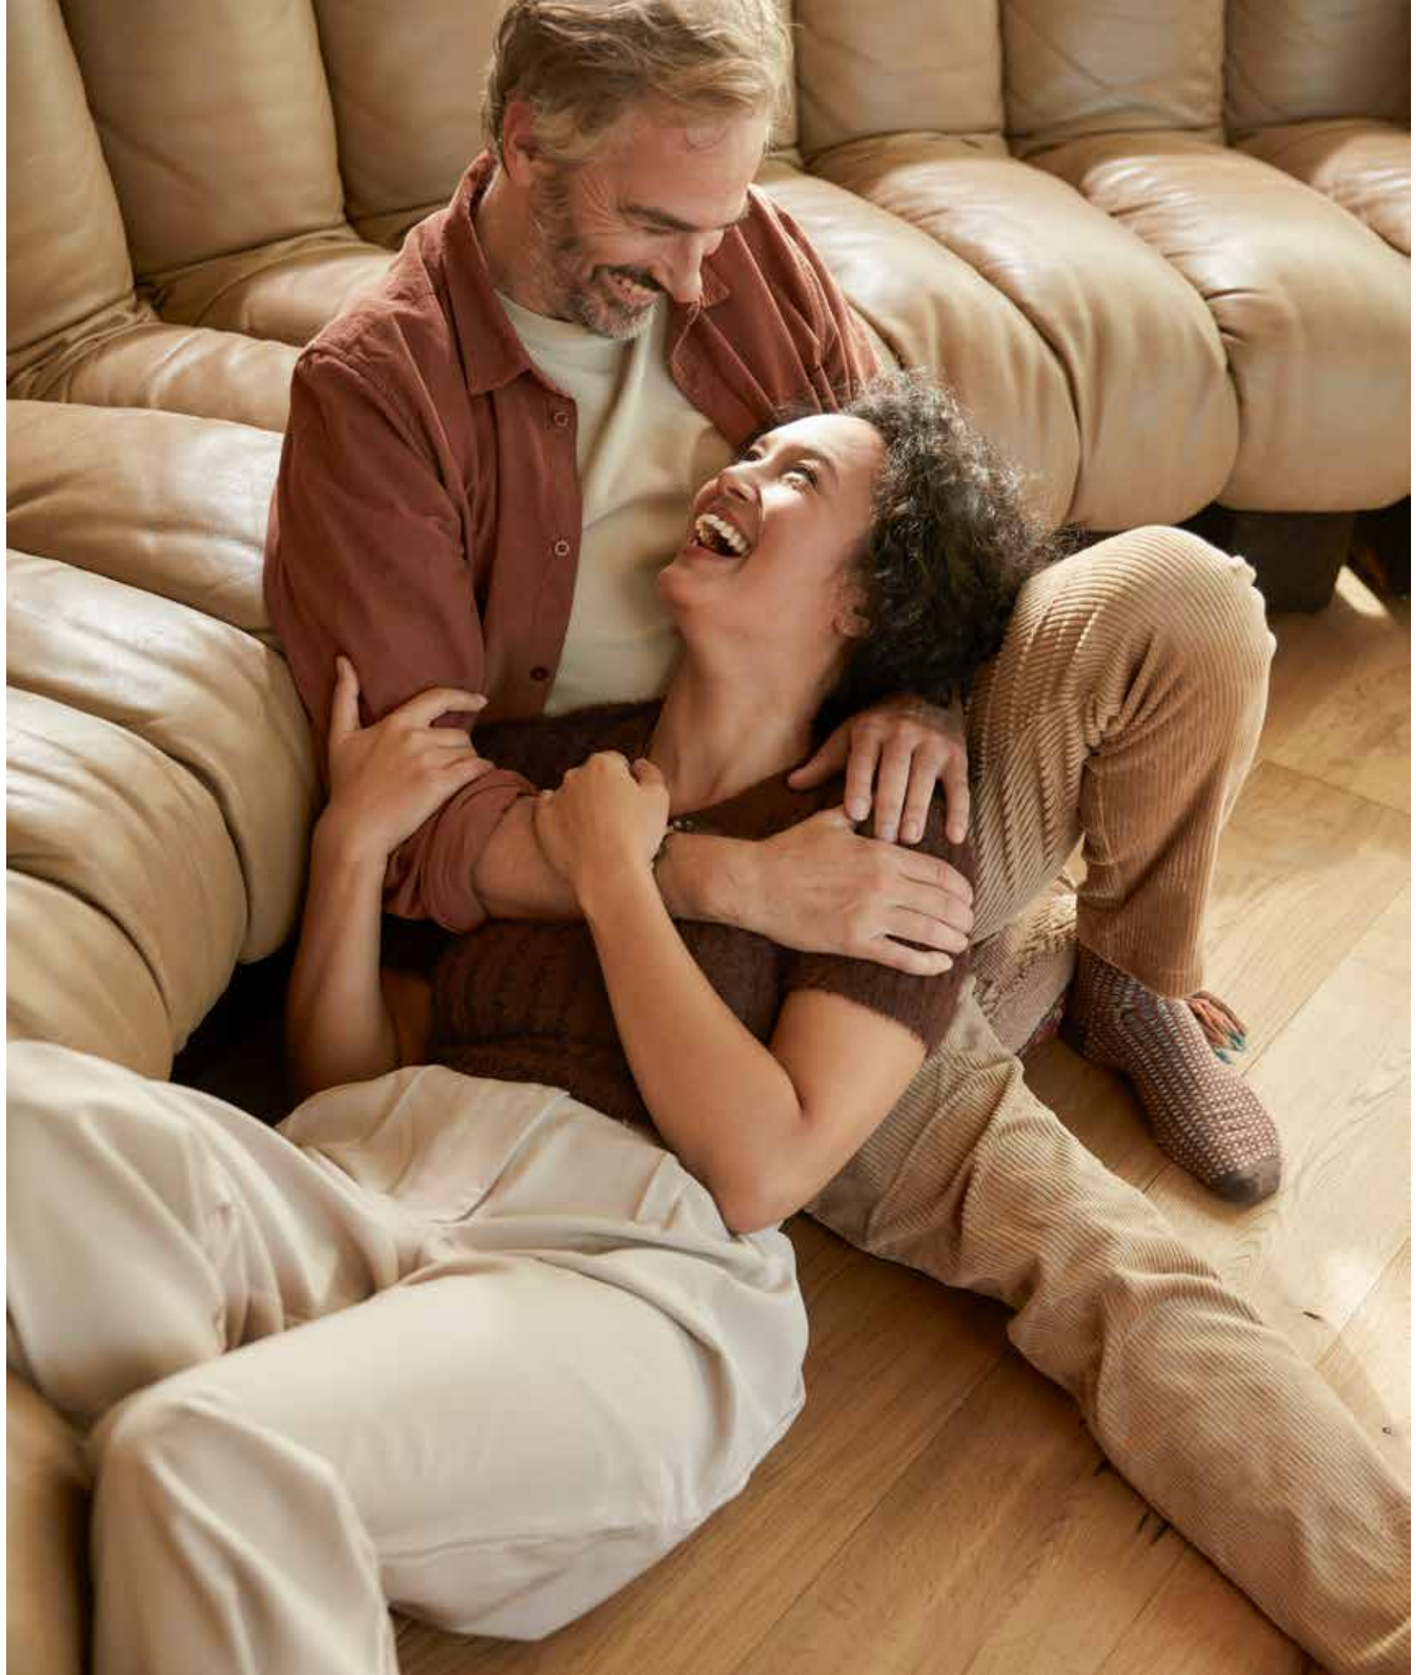

A floor is the foundation on which everything rests. You can take that literally, because a well-designed floor brings a sense of calmness into the home. The warm **simplicity of nature.** No matter how hard life wobbles. With two feet planted on the floor, all that noise dies down to a soft murmur and every moment spent at home evokes tranquillity. Our floors are a blank canvas on which you can paint the life you want to live. **A life devoted to small pleasures.** Things to cherish. Rest and relaxation. Life in the purest sense of the word.

Pure nature

What rages outside is just a distant murmur in your home

Anyone who has ever looked at a tree in amazement knows that nothing is as beautiful – or as unpredictable – as nature. Every tree in the forest is just that little bit different, perfect in its imperfection. And the same applies to the planks in your floor. With love and patience we select the most beautiful trees, determine which part of the trunk to use and choose the right finish.

Nothing is as pure as nature

An interior that suits you down to the ground

You can live and love on a wooden floor for generations. It is the eye-catcher of your interior, the foundation that remains timelessly beautiful. Your parquet sets the tone, so it is important that it reflects who you are. Aren't the spaces where you spend your time also a part of yourself? Our collections play with colour shades, wood drawings and grain structures, creating a floor for everyone. Do you like modern, clean lines? Or do you prefer cosy and natural? You decide!

Peace in your space, peace in your mind

Studies have shown time and time again that nature has a calming effect on our senses. People who regularly visit the forest have considerably less stress or anxiety. Spending time in our natural surroundings brings us into balance. And it is exactly that effect that we bring indoors with our wooden floors. With organic materials, earthy colours and natural laying patterns, we create peace, harmony and cosiness in your interior. Perfect for people who like to cocoon.

From nature, for nature

Wood is one of the most environmentally friendly choices you can make for your floor. Because trees absorb carbon dioxide and produce oxygen, wood is regarded as a carbon neutral product, even after felling. On top of that, new trees are also being planted. Wood is a renewable raw material that remains beautiful for ages and is easy to recycle. And that's exactly how we like it.

Lamett's sustainable direction

At Lamett, we believe that sustainability is not a trend but a commitment. With ambition and a clear vision, we work every day towards a better future. Our approach is built on three strong pillars that truly make a difference.

1 Climate change

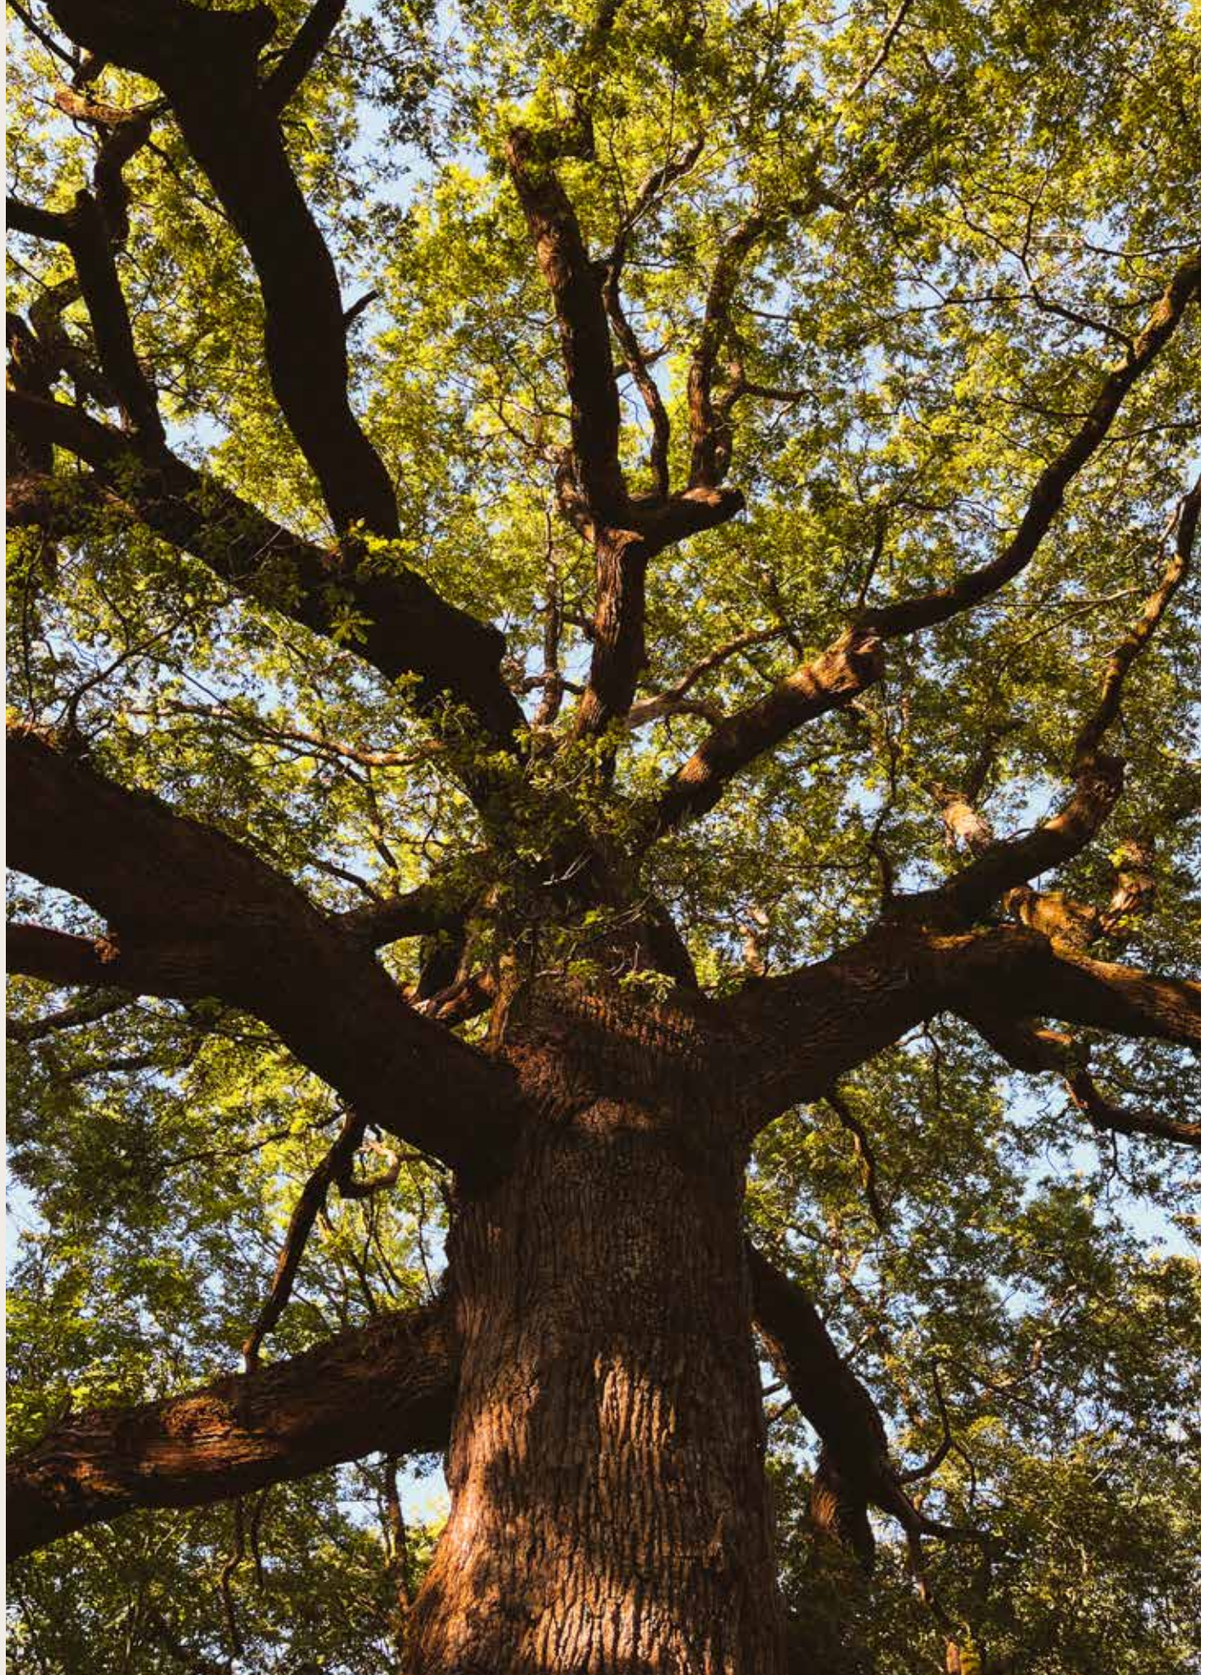

We do everything we can to reduce our ecological footprint. That means using resources responsibly, lowering emissions and investing in renewable energy. In doing so, we contribute to the transition to a low carbon economy.

2 Our people

Our employees are our heart. We provide fair and safe working conditions, encourage personal growth and safeguard mental well being. A healthy work–life balance? We work on it every single day.

3 Business ethics

Honesty and transparency form the foundation of how we operate. We carefully choose partners who share our values and build long term relationships based on trust and integrity.

EcoVadis Silver: international recognition

In 2025, we were awarded the EcoVadis Silver Medal — global recognition for our efforts in environment, ethics, social responsibility and sustainable procurement. This places us among the top 15% of companies worldwide in sustainable business practices.

Our ambitions

- By 2030, at least 90% of our wood will come from sustainably managed forests, certified according to PEFC and FSC®.
- Every board is checked for legality and origin. We collect documentation, assess risks and mitigate them where necessary. We personally visit our suppliers and verify compliance with legislation, traceability and certification.
- Each year, we publish a sustainability report outlining our goals, actions and results. Sometimes we succeed, sometimes we learn.

Curious?
Scan the QR code and discover our report.

How do you mean, PEFC and FSC?

PEFC and FSC® are globally recognized labels for sustainable forest management. They stand for:

- **Environmental:** protection of biodiversity and waterways
- **Social:** respect for local communities and good working conditions
- **Economic:** fair returns for forest owners and producers

They help prevent deforestation and promote responsible forest management. These certificates guarantee that your floor is produced with respect for people and the planet.

Truly nothing goes to waste

Trees purify our air. We depend on them. We use wood from sustainably managed forests. When a tree is harvested, new trees are planted according to a long-term plan. These young trees absorb CO_2 again and contribute to a healthy, renewable forest structure.

We maximise each log: for engineered parquet, we combine an oak top layer with species such as poplar and eucalyptus from fast-growing plantations designed to prevent deforestation and reduce pressure on natural forests. Wood residues are processed into pellets or fibreboards. Truly nothing goes to waste.

Naturally sustainable parquet

Lamett parquet is a natural product from renewable sources. It does more than last a lifetime. It grows with you. Every step, every moment adds character and creates a unique patina that tells your story. Over the years, your floor becomes richer, more beautiful and more personal. And if damage ever occurs? No worries! We are here to advise you. Lamett parquet can often be easily repaired while retaining its original charm.

A penchant for oak

No wonder that we use oak for all our collections at Lamett – this beautiful type of wood is irresistible. Oak is naturally full of variation, from the wood pattern to the grain structure. That structure is influenced by the climate, the seasons, the place where the oak is growing and, of course, time. Some oak trees keep growing for up to two hundred years.

With each collection, we carefully examine each individual plank. We especially look out for knots, grooves, shades of colour and any other twists and turns of nature. In itself, oak varies in colour from a beautiful tan to a deep dark brown. With additional processes such as smoking, staining, ageing or colouring, we create the parquet that suits you best. These processes bring out the character of the wood even more: robust, tough, sleek and elegant.

Why choose wood flooring?

1 Because a wooden floor lasts for years

A floor that sustains life must not only be timeless but also very solid. This can only be achieved using the very best materials and with craftsmanship based on love and know-how. Lamett floors are made well and with pleasure – and you can feel that.

2 Because Lamett stands for timeless quality

We believe in the vagaries of nature. We love the character that lays hidden in a knot, a unique grain pattern or an unexpected range of colours. However, we do not believe in the vagaries of fashion. We love the timeless beauty that adapts seamlessly to your personal taste. Rustic or modern, light or dark, always stylish.

3 Because parquet and underfloor heating are the perfect match

Our parquet already exudes cosiness in itself, but is also perfectly compatible with underfloor heating. Only the Vienna collection prefers to keep a cool head. Be sure to ask which types of underfloor heating go best with your chosen floor.

4 Because parquet from Lamett is fully finished

Lamett floors are finished before they are installed. As soon as the installer has done his job and the glue is dry, you can start using and enjoying your floor.

5 Because with Lamett you get craftsmanship, expertise and excellent advice

Parquet is alive, and that requires a specific approach. At Lamett we know our craft through and through. Before, during and after installation, we are at your service with our many years of experience and boundless know-how. You will also find many answers on lamett.eu.

Guarantee for up to 20 years

At Lamett, we know that parquet that is installed and maintained according to the highest standard will remain beautiful for decades. That is why we offer a 20-year guarantee for parquet in the home and 10 years for parquet in a commercial environment. Enough for an entire generation.

It’s your choice

Multilayer or solid parquet?

Multilayer parquet is also known as laminate parquet or composite parquet. This type of wooden floor consists of three or more layers of wood, glued to each other at right angles. The top layer (at least 2.5 mm thick) is pure oak, while the other layers are often made of conifer wood or chipped timber material. Thanks to the gluing at right angles, multilayer parquet is much more stable and predictable than solid parquet. All of our collections, except for the Vienna collection, are multilayer parquet.

As the name suggests, **solid parquet** consists of a block of solid wood in which a tongue and groove is applied. Precisely because these floors are solid, they are also the most sensitive to shrinkage and expansion. Wood is alive, so it looks a little different every season. Only our Vienna collection is solid parquet.

Tongue and groove or drop-lock system?

A parquet with tongue and groove should be installed completely glued down. A click system allows the floor to be installed as a floated floor, but can also be installed glued. We always prefer a glued installation. Especially in combination with underfloor heating, a fully bonded installation is a must. This way, you get the best heat efficiency from your floor.

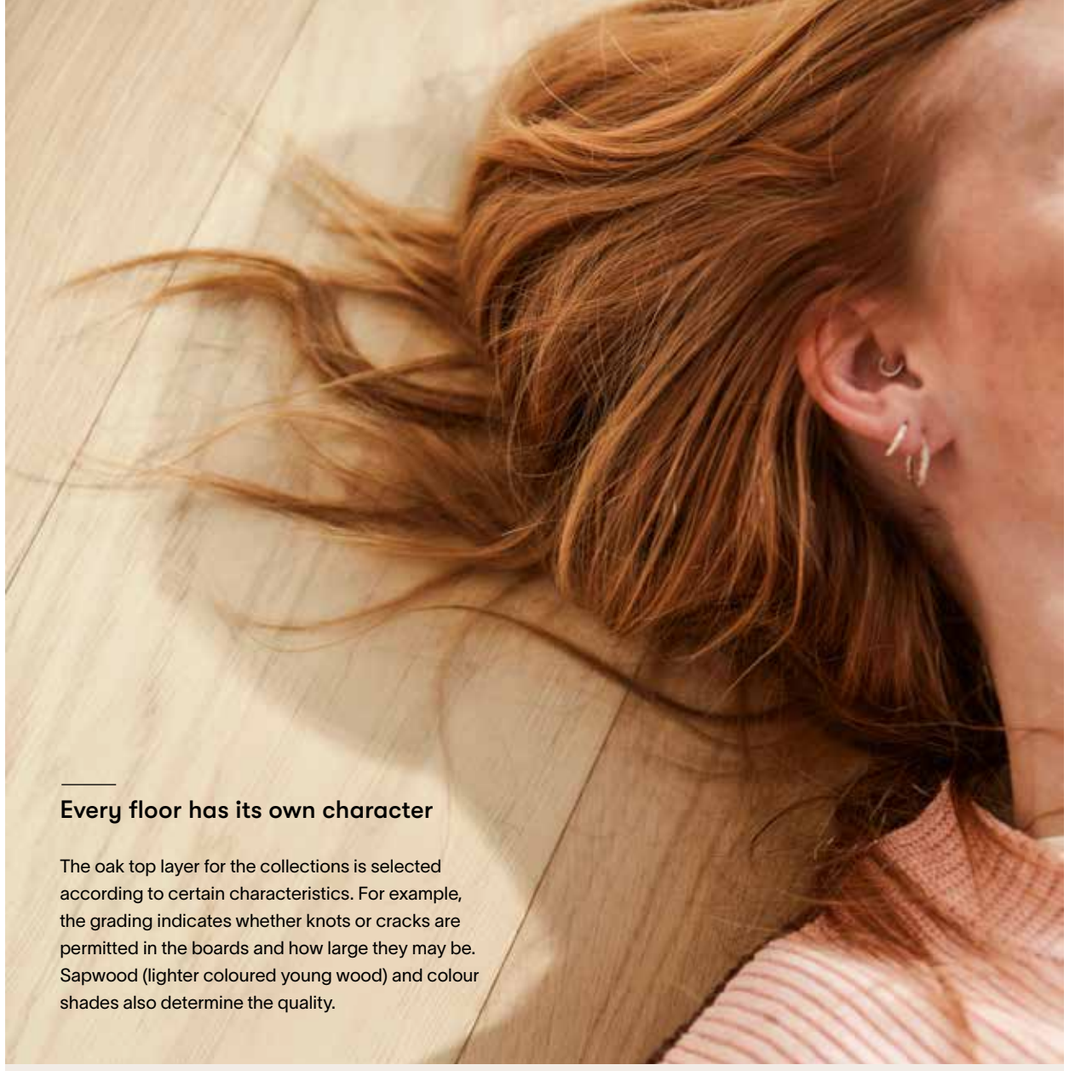

Would you like to know more?
Visit lamett.eu for the finer details.

Multilayer (left) and solid parquet (right)

Drop-lock system (left) and tongue and groove (right)

Every floor has its own character

The oak top layer for the collections is selected according to certain characteristics. For example, the grading indicates whether knots or cracks are permitted in the boards and how large they may be. Sapwood (lighter coloured young wood) and colour shades also determine the quality.

	Variation in colour or structure	Sapwood	Knots	Cracks

All the necessary accessories

Lamett doesn't just supply your floor but also everything that comes with it. Skirting boards. Profiles. Glue. Maintenance products. Order them through a point of sale or just through our webshop.

Lamett Power Glue MS

This glue is perfect for bonding multilayer and solid parquet. Gluing creates a more design look and a quieter floor. With underfloor heating, bonding ensures optimum efficiency. Also think about the right glue comb!

- LPG MS 15 kg (ca 15 m²)
- Glue comb TKB 11-Wood

Lamett Moist & Sound Protect subfloor

Have you chosen a collection with a click system? Then you can also install the floor as a floating floor. To do this, you must first install a subfloor. Use the Lamett Moist & Sound Protect for optimal results. This subfloor has an integrated moisture barrier and an overlapping section with a self-adhesive strip. So it's easy to install.

- Moist & Sound Protect Underfloor — 1000 x 15000 x 2,5 mm

Profiles

Our 3-in-1 profiles (oil, lacquer, untreated) can be used as end, T or transition profiles. They match perfectly with your parquet floor, regardless of the collection it originates from. Do you like a more design look? Then an aluminium profile can give an extra modern touch. T-profiles are also available in the colours silver and bronze.

- 3-in-1 profiles — 62,8 x 2150 x 15,75 mm
- aluminium T profile — 25 x 1000 x 9,5 mm

Skirting boards

You can also adapt the skirting boards (oil, lacquer, untreated) completely to your style and taste. For example, you can choose between white painted skirting boards or veneer skirting boards. The latter are available for every collection and colour.

- skirting boards — 70 x 2200 x 14 mm
- painted skirting boards 6 cm — 60 x 2400 x 14 mm
- painted skirting boards 8 cm — 80 x 2400 x 14 mm

We are people persons

We rely on our machines every day. To fell trees. To sand wood. To create floors. We like to do things right, and that starts with the best equipment. Yet it is not machines but people who make things run at Lamett. We design parquet floors on which everyday life can unfold in peace. Where people can enjoy the small pleasures and tender moments that make life what it is. Close to the wood, close to the skin.

Done well and with pleasure

This philosophy can be felt in all layers of the company. At Lamett, success is celebrated and pleasure is shared. A company can never experience a healthy growth if its people are unhappy. So respect, self-development and positivity are vitally important. We are passionate about what we do, and you will notice that as a customer. We have an answer to every question, and our passion – as well as our optimism – is tangible in every interaction. We prefer to work with suppliers and partners who share the same positive attitude. Our associates are all companies that treat their people with respect and humanity.

Everything with a smile

Whatever you need, our people are happy to help you.

Pure craftsmanship

In our workshop, we saw customised samples for both private individuals and distributors.

The beating heart of Lamett

From our warehouse in Deerlijk, Belgium, floors are shipped to all corners of Europe – and far beyond.

A solid reputation

At Lamett, we are known for our excellent quality, finishing and service. We are very proud of that.

Giovanni Duvillier Technical Support Manager

The answer to all your parquet questions

We are always ready to guide customers through the technical details of our products. Our passion, knowledge and expertise filters through in every interaction: we love what we do and we only want to deliver the very best. We always look for the best solution to your problem.

With Lamett, you have the perfect partner. Not just to answer your technical questions, but also to find a solution that suits you down to the ground. After all, isn't that what it's all about?

Underfloor heating: yes or no?

Did you know that you can easily combine a parquet floor with underfloor heating? A dream for those who love to hang out in stocking feet – or simply like to heat their homes sustainably. A few things to keep in mind:

- If underfloor heating is important to you, it is best to opt for multilayer parquet. Because the wood layers are glued to each other at right angles, the wood has less chance of shrinking or expanding due to temperature fluctuations.
- It is also best to opt for full bonding. This ensures the best return. Otherwise you will get an insulating layer of air that makes it more difficult to heat up or cool down the room.
- Wood is a natural product. Parquet therefore needs time to acclimatise. Always follow the system's warm-up and cool-down protocol and proceed very gradually.
- Match your type of underfloor heating to your parquet and your room. You can read all about it in our Parquet Bible on lamett.eu.
- Vienna 150 is a wide solid parquet, because of which it is less suitable for underfloor heating.

Choosing the protective layer: oil or lacquer

Oil and lacquer protect your wooden floor against moisture, dirt and stains. After all, people live their lives on parquet, as well they should. But what exactly is the difference between the two? And how do you know which is better for your floor?

- With an oiled parquet, oil is applied and wiped off until the wood fibres are completely saturated. This prevents dirt or moisture from penetrating the wood. With regular and half-yearly maintenance, you nourish this protective layer and so avoid stains. Important: never use pure water, but add a suitable soap (such as Woca Natural Soap).
- With a lacquered parquet, a film is applied to the wood surface. This completely closes the pores so that the floor is well protected against moisture. You can easily maintain a lacquered parquet with a cleaning agent for lacquered floors. Important: over time, micro scratches will appear due to the use of the floor and its expansion and contraction. However, these scratches are scarcely visible to the naked eye. Your floor remains optimally protected when you treat it annually with a polish (such as Bona Wood Floor Polish).

Wood in the kitchen or bathroom: a tricky question

All kinds of things happen in kitchens and bathrooms, many of them involving water. So we advise against using parquet in these areas. Even if you really take good care of your floor and take all the necessary precautions, it simply won't last as long in these rooms. This is why our warranty doesn't apply in these areas. As much as we would like it to be otherwise.

Watch out for scratches

Over time, your parquet floor will develop a unique patina that tells your life story. Small scratches and blemishes can often be repaired quickly. But, of course, prevention is always better than cure. These tips will help you enjoy a floor that stays beautiful for a lifetime:

- Attach felt pads under the legs of your table and chairs.
- Do you want to move a piece of furniture? Then lift it. Dragging is bad for both your parquet and your furniture.
- Don’t drop objects with a sharp point on your floor.
- When you vacuum, always make sure that you fold out the brush on the suction nozzle.
- Treat your floor with the recommended maintenance products.

Ideal humidity level

Wood is a natural product. Although the trees in the forest can easily withstand the rain, the boards are more sensitive when it comes to humidity. Your parquet will expand and contract over the seasons, but your floor will be the happiest with a relative air humidity level of between 40% and 55%.

How do you maintain that air humidity level? Good ventilation goes a long way. If your air is too dry, a humidifier can help. Would you like more technical information about your parquet? Download our Parquet Bible on lamett.eu.

Maintenance is gold

No matter how beautiful and high-quality your parquet, it always needs the right care. For daily maintenance, you can wipe your parquet with a soft brush. If you prefer to vacuum, always fold out the brush to avoid scratches.

Do you have an oiled parquet? Then never use pure water to clean your floor, but add a nourishing maintenance product, such as the Woca Natural Soap. Once a year, you can use a nourishing conditioner to keep your floor extra protected. Preferably do this just before winter. The better your floor is nourished, the more resistant it is to stains and dryness.

Do you have a lacquered parquet? Keep the floor clean with a special cleaning agent for lacquered floors such as the Bona Wood Floor Cleaner. Once a year, you can restore the lacquer layer of your parquet with a good polish such as the Bona Wood Floor Polish.

3 golden rules

1. Never use excessive water on your wooden floor.
2. Mop your floor with lukewarm water and a classic floor cloth or mop.
3. Stick to the correct dosages of your maintenance products.

We’d be happy to help you choose

Our parquet floors radiate warmth, cosiness and peace of mind. It goes without saying that we also want to promote these values as people and as a brand. We can help you at any time with advice, knowledge and answers. That is important – just as important as choosing the right floor. Not quite sure where to start? We are happy to help you on your way.

Order samples of your favourite parquet

Do you not only want to see a floor but also feel it before you decide? For us, that’s a perfectly normal request. Why not order samples of your new floor at lamett.eu and immediately experience the floor on which you would most like to live?

Because parquet comes straight from nature, no two planks are the same. A sample gives a good idea of the collection but doesn’t always show all the characteristics. So don’t just rely on a sample but also look at photos on the website, references, social media...

Order your samples on lamett.eu

Find a showroom near you

Be sure to also visit a showroom to see your favourite floors in real life. After all, the colours on a screen or in a brochure don’t always reflect reality. Do you still have questions? We have conveniently collected our knowledge, experience and tips & tricks for you in our own Parquet Bible.

Download the Parquet bible on lamett.eu

Be inspired by interior ideas and reports from
the homes of customers who preceded you.
